TTS Sustainability Strategy

1. Vision & Commitment

Texo Trade Services (TTS) is committed to contributing to a more sustainable textile industry by integrating environmentally responsible practices into its products, processes, and partnerships. Sustainability at TTS is driven by continuous innovation and a strong belief that high-quality performance and environmental responsibility must go hand in hand.

2. Strategic Approach

Our approach focuses on three key pillars: (1) Sustainable materials and innovation, (2) Reduction of environmental impact, and (3) Circular thinking. Through these pillars, TTS aims to support its customers in making more responsible choices while maintaining the performance standards required in professional printing and textile applications.

3. Sustainable Materials & Innovation

TTS continuously invests in the development and introduction of more sustainable textile solutions. This includes the use of recycled materials, such as recycled PET, and innovative technologies such as CiCLO®, which enable synthetic materials to behave more like natural fibres at end-of-life. These innovations contribute to reducing microplastic pollution and improving biodegradability while maintaining durability and quality.

4. Environmental Impact Reduction

TTS is committed to reducing its environmental footprint across the lifecycle of its products. Initiatives include minimizing waste, reducing reliance on PVC-based products, and developing lighter textile alternatives that require fewer raw materials. By focusing on smarter material selection and production processes, TTS contributes to lowering CO2 emissions and overall environmental impact.

5. Transparency & CO2 Insights

TTS has calculated CO2 emission factors for its key materials and makes this information available through its digital portal. By providing customers with transparent and accessible CO2 impact data, TTS enables informed decision-making. Customers can clearly understand the environmental impact of the materials they use and compare alternatives. Through lighter materials, the use of recycled yarns, and continuous innovation, TTS offers more sustainable alternatives that help reduce overall environmental impact. This allows customers to actively choose lower-impact solutions without compromising on performance or quality.

6. Circularity & Recycling

Circularity is a key focus area within TTS's sustainability strategy. The company promotes recycling initiatives and works towards extending the lifecycle of textile products. By enabling reuse and recycling of materials, TTS supports the transition towards a circular economy in the visual communication and textile printing industries.

7. Future Focus

TTS will continue to strengthen its sustainability efforts by expanding its range of responsible products, improving transparency, and collaborating with partners across the value chain. Sustainability will remain a core element of innovation and business development, ensuring long-term value for customers, partners, and the environment
