## CO<sub>2</sub> IMPACT CALCULATION

### HOW TTS MAKES THE CO<sub>2</sub> IMPACT OF ITS PRODUCTS TRANSPARENT

More and more customers are asking us not only what we deliver, but also how sustainable our products are.

A logical question and one we take very seriously at TTS. That's why we've laid an important foundation: we have made the **CO<sub>2</sub> impact of our products transparent and measurable.**

# TTS MAKES SUSTAINABILITY UNDERSTANDABLE AND TRANSPARENT

## Cradle-to-gate

For our key products, we have systematically identified where emissions occur. This includes:

- The raw materials we use
- Energy consumption during production
- Transport movements
- Waste processing

Everything that significantly contributes to CO<sub>2</sub> emissions has been included. We call this a cradle-to-gate approach: from the beginning of the process to the moment the product arrives at our warehouse.

## One clear result

All these elements are converted into CO<sub>2</sub> emissions and combined into one clear outcome: **the carbon footprint per product**, expressed in CO<sub>2</sub>.

This allows us to make something complex like sustainability **understandable, comparable, and transparent**.

## Based on international standards

In this approach, we follow internationally recognized guidelines such as ISO 14067. This means our calculations are:

- Reliable
- Compliant with laws and regulations
- Suitable for reporting, customer inquiries, and audits

No assumptions, just substantiated data.

## Why we do this

We do this not only because it's required, but mainly because it helps to:

- Inform customers better
- Support shared sustainability goals
- Enable more conscious decision-making

It also gives us insight into where we can take further steps to reduce our impact.

## Working together to lower impact

For us, sustainability is not an endpoint, but a continuous process. By creating insight, we can improve more effectively together with our customers and partners.

Do you have questions about the CO<sub>2</sub> impact of specific products or would you like to include this in your own reporting? We're happy to think along with you.
